

Stainless Saw Saver

Triple S-Series Metal Cutting/Drilling Enhancer

Description

Triple S-Series Metal Working Fluids are designed to provide excellent performance without the use of Chlorine and Phosphorus. They employ a special additive combined with active agents to produce a full line of cutting and drilling enhancement products.

The unique enhancement agent in **Triple S-Series** Metal Working Fluids functions by physically laying on the work surface during cutting and drilling. It creates a film of low shear strength and high heat dispersion. This chemical inert reaction with metal surfaces permits higher turning speeds if needed.

Features/Benefits

- ✓ **Improves Part Quality**
 - Improved Heat dispersion
 - Improved surface finish
- ✓ **Improves Operational Efficiency**
 - Extended tool life
 - Minimizes Built-Up Edge (BUE)
 - Higher Turning Speeds & Feeds
- ✓ **Environmentally Responsible**
 - Chlorine free
 - Phosphorus free
 - Reduces disposal costs
 - Lends well to recycling

Made by the working man for the working man to save hard earned dollars by life extensions of valuable tools, bits and holesaws. A True USA made product.
